

Cost Effective Motion Control for CompactLogix® 5380

Terryville, CT – Advanced Micro Controls Inc. (AMCI) announces their [ANG1\(E\) integrated stepper controller/drive](#) that connects directly to Rockwell Automation's new CompactLogix® 5380, providing a low cost, sophisticated motion control solution. The ANG1(E) "2-in-1" product design integrates a stepper controller and drive into a single package, significantly reducing cabling with the ability to expand up to 6 axes of motion over a single EtherNet/IP connection. Move commands are easily programmed through Studio 5000®, and the standard DIN rail mounting eases installation.

AMCI proudly designs and manufactures their products in-house, enabling superior quality and innovative solutions. The company has been a Rockwell Automation Encompass Product Partner for over 25 years, and develops motion control products for Allen-Bradley PLCs using Rockwell Automation Enabled™ technologies to ensure 100% compatibility with Allen-Bradley PLCs and PACs. AMCI offers a complete selection of motion control products including motion controllers (both on and off the network), motors, drives, as well as integrated solutions. Because their products are 100% compatible with Allen-Bradley PLCs, users can be confident that AMCI motion control solutions will work for their application.
